Overview

Background on Affordable Housing Credit

On June 3, 2014, Governor Mary Fallin signed SB2128, the Oklahoma Affordable Housing Act, which provides for the allocation of \$4 million per year in nonrefundable state low-income housing tax credits (68-2357.403). The act, administered by the Oklahoma Housing Finance Agency, dictates that credits are used to:

- Raise private equity to finance affordable housing for families and seniors.
- Help in counties with populations of 150,000 or less (**HB1411 removed this criterion effective 11.1.19**).
- Provide affordable rent for low-to-moderate-income Oklahomans, typically those earning 60% or less of the Area Median Income.

The tax credit is claimed annually over a 10-year period, beginning when the buildings are placed in service. Owners and managers of low-income housing tax credit properties must ensure that residents meet eligibility requirements set forth by federal regulations (Internal Revenue Code Section 42). The tax credits (both state and federal) are subject to recapture if any violations of the eligibility restrictions are discovered. If any portion of the federal tax credits are recaptured, this will trigger recapture of the proportionate amount of the state credit.

The Oklahoma Affordable Housing Act is subject to review every five years by a committee of nine members. The Governor, the President Pro Tempore of the Oklahoma State Senate and the Speaker of the Oklahoma House of Representatives are each authorized to appoint three members to the committee. As a matter of practice, the incentive is being reviewed by the Incentive Evaluation Commission (IEC) every four years. Thus far, the incentive was reviewed in 2018 and 2022.

Need

According to the U.S. Department of Housing and Urban Development, families who pay more than 30% of their income for housing are considered cost burdened and may have difficulty affording basic necessities, including clothing, medical care, transportation, and food. The situation is worse after the COVID19 pandemic that saw large scale job losses, supply chain disruptions for housing raw materials, plus an increase in demand and price for starter homes. According to the National Low Income Housing Coalition's 2023 Out of Reach report, the two-bedroom housing wage in Oklahoma is \$18.00 per hour; Oklahoma ranks 44th for housing costs. A minimum wage worker must work 99 hours per week to afford a modest two-bedroom apartment.

Effective, affordable housing policy can encourage the development and preservation of safe, secure and affordable housing for Oklahomans. Across Oklahoma, there is a shortage of rental homes that are affordable and available to low-and moderate-income households. Many of these households are severely cost burdened, spending more than half of their income on housing. Severely cost burdened households are more likely to sacrifice other necessities like healthy food and healthcare to pay the rent, and more likely to experience unstable housing situations.

According to the National Low Income Housing Coalition's [2023 Report on Housing in Oklahoma](#):

- 128,556 or 25.2% of renter households a max of 30% of the Area Median Income (AMI) \$23,817.
- \$595/mo is the rent affordable to households at 30% of the Area Median Income (AMI).
- \$37,436 is the annual income required for a two-bedroom rental at HUD's Fair Market Rent (FMR).
- 2.5 Full-Time Jobs is required at *minimum wage* to afford a 2-Bedroom Rental Home (at FMR).

Understanding the cost burden associated with accessing affordable housing options, the Oklahoma Coalition for Affordable Housing requested and funded this study from the Oklahoma Department of Commerce. The mission of the Coalition is to lead the movement to ensure all residents of the state of Oklahoma flourish in safe, affordable homes and to help communities develop safe and affordable housing options for all residents. The Coalition brings together a strong combination of organizations, finance professionals, service providers, economic development authorities and individual advocates to provide advocacy, education and practical training to foster the production and maintenance of affordable housing throughout the state.

During budget shortfalls and low funding periods, the Oklahoma Affordable Housing Act sometimes finds itself under consideration for termination by the Oklahoma Legislature. Like many of Oklahoma's incentives, this tax credit is performance based. The tax credits cannot be claimed until the buildings are built according to robust guidelines established by the Internal Revenue Service and Oklahoma Housing Finance Agency. The units must be occupied by income eligible tenants before tax credits can be released. Typically, units are filled with eligible tenants within two years of credit allocation by the Oklahoma Housing Finance Agency.

This study will focus on the impacts of the construction activities as well as the impacts of managing and maintaining the housing units in Oklahoma. However, this analysis does not consider some additional social and economic benefits of the Housing Act, such as:

- The value of reliable, safe and affordable housing for low-income families, particularly improved education outcomes for children, and job stability.
- Reduced Medicare spending from seniors being able to live in non-assisted living senior communities longer and improved health outcomes.
- Reduction of homelessness and the extensive community resources, such as health care and law enforcement, which can now be spent on other issues involving homeless populations.

The benefits of these secondary effects are significant, sometimes difficult to measure, and should be carefully considered when designing, reforming, or addressing the effectiveness of each program.

Even without those considerations, the construction and renovation of the 4,935 housing units produced between 2015 through 2023 will provide significant contributions to Oklahoma's state and regional economies. The economic impact represents units built between 2015 and 2023 and is representative of those 67 projects completed during that time in 71 locations. The construction and long-term employment impacts will increase as more projects receive funding from the Oklahoma Affordable Housing Act and the total incentives will increase along with the increase in eligible investments.

This Economic Impact Report only considers allocations made during 2015-2023 and does not forecast future awards.

Economic Impact Estimates

Methodology and IMPLAN

IMPLAN software was used to model this Housing Tax Credit economic impact analysis. IMPLAN is an input/output model that helps institutions understand the linkages between industries in the local economy and how policy or changes in industry can influence economic activity in the region. Each industry has different spending patterns and engages with different suppliers at the local level; IMPLAN helps to evaluate the overall effect of those individual industries. In the case of Oklahoma's Affordable Housing Act, the construction activities were captured under three main categories and the ongoing activities were modeled by continued employment directly associated with the level of employment it would take to manage and maintain these types of residential units.

This economic impact report focuses on the construction and permanent employment activities associated with the construction of 67 development projects across 71 locations in Oklahoma. The report does not include new developments that will occur after the current 67 development projects. While focusing on construction and permanent employment, this analysis does not consider additional benefits such as:

- Reducing Medicaid housing costs as seniors are able to age in place at these developments.
- Reducing housing burdens leave families more money to spend on other essentials that are otherwise forgone, such as quality food and childcare.
- Stabilizing housing for low-income families means children are able to remain in schools consistently, leading to better outcomes for them.
- Economic and social benefits of reducing homelessness, and more affordable options for veterans, children and other vulnerable populations.
- Revitalizing properties previously abandoned or severely distressed, and community reinvestment in improvements for sewer, flooding, waste management and other infrastructure.
- Increasing the tax base from improved valuations of properties and increase in resident population.

Construction activities are temporary in nature; however, certain job functions such as maintenance, property management or rental income represent activities that continue from year to year until the residential structure is no longer habitable. Employment associated with the regular operation of the 4,935 multi-family and other residential housing units is assumed to maintain the same level of direct employment over time. Due to intense regulatory scrutiny and significant paperwork needed to keep properties in compliance, it is estimated that 243 FTE jobs would be directly employed to manage and upkeep these types of properties. However, as the number of housing units/development projects increase, so should the number of jobs needed to operate the units and maintain compliance. The categories of construction and employment considered in the model are listed below:

- Multi-Family Residential Construction
- Single-Family Residential Construction
- Residential Construction Rehab/Maintenance
- Regular Employment Associated with Multi-Family Units

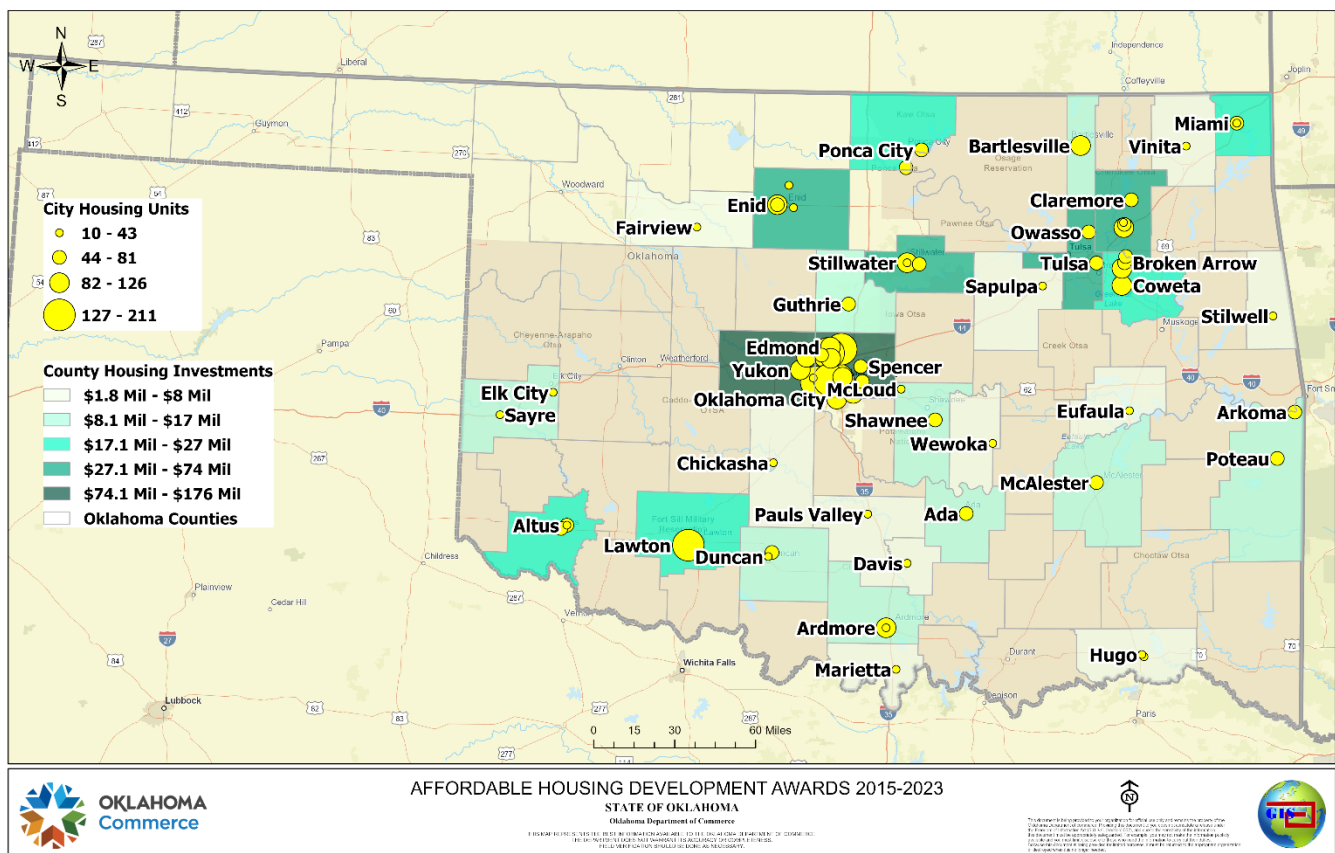

The construction and maintenance investments were modeled separately from regular employment operations. Between 2015 and 2023, the Oklahoma Affordable Housing Act has been used to provide financing for 67 projects in 71 locations by development companies. These 67 development projects occurred in 38 communities and 31 counties across Oklahoma and created a direct impact of over \$709 million in construction activity used to build 4,935 housing units across Oklahoma. The Oklahoma Housing Finance Agency allocated \$35,332,125 in state

affordable housing tax credits over this 8-year period. Both investment and employment will increase along with incentives as more projects are funded by developers using incentives from the Oklahoma Affordable Housing Act.

The map below provides a snapshot of where the developments, spurred by the Oklahoma Affordable Housing Tax Credit, are situated as of 2023. Investments are being made in the city centers of some rural counties and are used to help revitalize various areas that have been neglected for a long time. Many of these communities also struggle with the attraction of new businesses due to the very limited options available for new housing. These communities also struggle with an aging and obsolete housing stock and find it difficult to support the economics of new market-rate housing.

Compared to 2022, over \$59 million in new construction and \$4 million in housing tax credits were approved in 2023. This map illustrates overall levels of investment and housing units as of 2023.

Affordable Housing Development Awards 2015 to 2023

Economic Impact Summary

The Oklahoma Department of Commerce used IMPLAN software to model this economic analysis. The report focuses on the construction and permanent employment activities associated with the creation of 67 development projects across 71 locations in Oklahoma that received award notification between 2015 and 2023. The report does not include new developments that occur after the current 67 projects.

Employment: Over the years an average of over almost 1,100 construction jobs are impacted by the development of all 4,935 units. If no new projects are approved after 2023, there will be a significant reduction in construction impacts for the following years after installation or maintenance has been completed on the 67 developments in 71 locations. Long term impacts shows about 633 jobs impacted by 4,935 units in operation.

Labor Income: The estimated 243 jobs employed by developers to manage and maintain the 4,935 units are projected to directly generate over \$11 million in labor income from payroll and sole proprietors associated with keeping the units in compliance and maintaining the proper paperwork.

Economic Activity (Output) Impact: The Oklahoma Housing Finance Agency allocated \$35,332,125 in state affordable housing credits. Housing development companies used the credits to provide financing for 67 developments in 71 locations representing 38 communities and 31 counties across Oklahoma. The developments created a direct impact of over \$709 million in construction activity to build 4,935 housing units across Oklahoma and is estimated to create over \$1.75 billion in economic activity between 2017 and 2024.

There are significant social impacts (such as the value of reliable affordable housing options, improved health outcomes and the opportunity to reduce homelessness) not included in this study that should also be considered when designing, reforming or addressing the effectiveness of the program.

The construction and renovation of the 4,935 housing units from the 67 development projects awarded between 2015 through 2023, will provide significant contributions to Oklahoma's state and regional economies. As the Oklahoma Affordable Housing Act finances more projects, both investment and employment will increase along with incentives. More importantly, the key result is the provision of housing options that are affordable to households with lower incomes.

Potential Property Tax Summary: The chart below summarizes potential property tax generation by properties built as a result of the LIHTC incentive. Assuming property values are maintained/flat over time then the total property taxes generated by these properties should be roughly \$8.2 million annually.

Year	Cumulative Units	Cumulative Construction	New Construction	Property Tax Est.
2015	460	\$66,887,093	\$66,887,093	\$710,210
2016	820	\$137,991,832	\$71,104,738	\$1,434,427
2017	1,524	\$232,061,720	\$94,069,888	\$2,490,498
2018	2,030	\$311,713,328	\$79,651,609	\$3,459,973
2019	2,557	\$387,721,879	\$76,008,551	\$4,382,645
2020	3,184	\$494,038,703	\$106,316,824	\$5,646,270
2021	3,759	\$593,999,323	\$99,960,620	\$6,840,991
2022	4,269	\$650,029,353	\$56,030,030	\$7,547,972
2023	4,935	\$709,061,392	\$59,032,039	\$8,212,020

Employment

Employment impacts are not only limited to people directly employed at the multi-family units, but also include impacts from the indirect and induced employment. The indirect impacts would include goods and services consumed by the unit operators or construction companies, while induced impacts would include household consumption from those directly employed to construct or operate the housing units.

Based on responses from development and property management companies, roughly 243 workers would be needed to manage and maintain the 4,935 units that qualify for the federal incentive. As the number of housing units increase, there would be a proportionate increase in employment to maintain compliance and upkeep of the property.

- The 243 jobs associated with the normal operations of those leasing offices would then support an additional 390 jobs through:
 - Induced impacts spending by regular employees in the local market; and
 - Indirect impacts from spending by development and leasing companies with local businesses
- The overall impact of normal operations is about 633 jobs.

Total investment in construction or maintenance was estimated to be over \$709 million from 2015-2023. Over the years of construction, an average of over almost 1,100 construction jobs are impacted by the development of all 4,935 units. If no new projects are approved after 2023, there will be a significant reduction in construction impacts for the following years when construction or maintenance have been completed on the 67 projects.

- By 2026, the overall impact of the 67 projects is conservatively estimated to revert to the 633 jobs from the normal operations of the multi-family units.

Direct employment from ongoing operations and the associated construction impacts will increase as more projects are approved. The chart below assumes 4,935 units will be constructed by the end of 2024, which is 1,176 units more than the corrected 3,759 estimated to be built by 2022 and close to 670 units more than 2023 completions. After construction is completed, new developments will fully ramp up permanent staff to manage the facilities (roughly 2 years after award notification).

- Based on project awards from 2015 to 2023, the cumulative construction jobs impact is estimated to average over 1,100 temporary jobs annually.
- Long-term jobs associated with the operation of the housing units is estimated to peak at 633 in 2023.

Labor Income

Labor income is the earnings garnered by workers prior to taxes and certain fees; labor income also includes income to sole proprietors that could include contractors. The labor income displayed below is nominal and does not adjust for inflation or the time-value of money.

- The roughly 243 jobs employed by developers to manage and maintain the 4,935 units are estimated to directly generate \$11 million in labor income from payroll and sole proprietors associated with keeping the units in compliance and maintaining the proper paperwork.

As more projects get approved under the Oklahoma Affordable Housing Act, the direct long-term employment and construction impacts will increase as well.

- Considering the additional induced effects (employee spending) and the indirect effects (employer spending with suppliers), the total impact on labor income from regular operations is \$29.99 million.
- When considering the additional labor income from construction activities, the overall labor income contribution from the 67 housing development projects in 71 locations is estimated to be over \$100 million dollars during peak construction in 2017.
- When the temporary effects of construction from the 67 projects diminish over time, the overall impact on labor income is estimated to revert to \$29.99 million annually from regular operations.

New developments above the 67 projects will yield additional tax credits and additional labor income from both permanent employment and temporary construction activities.

Economic Activity (Output)

As a result of the incentive, 54 of the 71 communities where qualified affordable housing units are being built, were actual communities outside of Cleveland, Oklahoma, and Tulsa Counties. In addition to being great assets for communities, these projects also create demand for goods and services from local businesses. Economic Output is a measure of the value-added economic activity in the state. This includes the value of intermediary goods along with value-added activities associated with the production of finished goods within the state.

- The 243 direct jobs estimated to operate the newly constructed multi-family units directly generate almost \$74 million in economic activity statewide.
- When considering the induced effects (employee spending) and indirect effects (local purchases by leasing companies), permanent housing operations contribute over \$126 million in economic activity annually.

Furthermore, as the number of units/development projects increase, so will the annual employment needed to manage and maintain those properties. The construction activities from those 67 developments projects in 71 locations are represented in the impacts from 2017 to 2024.

- When considering the temporary construction or maintenance activities from the 67 development projects awarded between 2015 and 2023, the overall economic contribution from developers and leasing companies is almost \$1.3 billion.

The overall construction or maintenance impact will increase as more housing units are built. Typically, the impact results would correspond with the period when the actual construction occurs. In this case, roughly \$275 million was estimated for 2017 and roughly \$138 million for 2018 through 2020, then jumping to over \$200 million in economic activity statewide in 2021 and 2022. The value of construction deals fell in 2022 and 2023 due to a higher mix of less costly multifamily constructions, an impact of roughly half the peak years' activities.

- When permanent employment is added, the overall economic impact exceeds an estimated \$1.75 billion from activities in 2017 through 2024 alone.
- When the temporary effects of construction have subsided, the annual impact is estimated to revert to over \$126 million in economic activity annually from the ongoing operations of the housing units.
